Hmm, push notifications seem to be disabled in your browser. You can enable them from the 'Settings' icon in the URL bar of your browser. The trackpad feels almost too smooth, but it is responsive. The dedicated scrolling area is continuous with the rest of the trackpad, making it easy to accidentally trigger the virtual scrolling function. We had to tweak the Synaptics control panel to get a more natural feeling while scrolling. Even then, some applications (such as Firefox) refused to recognize virtual scrolling. Annoying? Yes, but it is an issue with the Synaptics drivers we have seen on other systems as well. The keyboard is comfortable, but feels slightly flimsy. There is also a dedicated hard button to turn off the track pad when using an external mouse, though we fail to see any situation where this would be helpful. The trackpad is off center compared to the case, but centered on the space bar of the keyboard. Canadian police find a new use for AirTags that Apple will never promote. Gamers will be happy to know that the L2335 handles anything you can throw at it when playing some of the most graphic-intensive and fast-paced games out there. We were able to play Unreal Tournament 2004 and Far Cry at a whopping 1600x1200 resolution using our Crucial Radeon 9800PRO video card. We tried playing games at the 1920x1200 resolution, but our video card simply could not handle it. But when you do decide to upgrade your video card, the L2335 should be ready for you. We did not experience any ghosting effects at all, which are typically associated with LCD monitors and gaming. Everything played super smooth just like you would expect from a traditional CRT monitor. This is no doubt due to the 16ms response rate which everyone has been waiting for in the LCD market. There have been some spec sheets of the L2335 floating around the Net that list this monitor with a 25ms response rate. We contacted our HP representative and he assured us that those specifications are old and that 16ms is correct. We have seen companies in the past introduce to the market an LCD display with two different specifications even though they share the same model number. We hope this is not the case and have confidence in HP. If you have experience with the L2335 and yours has a different specification, we'd like to hear about it. Other Ways to Get Needed Assistance With HP Device Issues. Our system came configured with an AMD Turion 64 X2 clocked at 2.2 GHz— the top of the line

offered in this series of notebooks. There is also a separate model number with Intel Core 2 Duo processors topping out at the T7200 (2GHz). The other differences between the two lines are the optional WLAN capability in the AMD line and a 512MB GeForce Go 7600 in the Intel line. Given the option between the two series, we would recommend the Intel line. We tried installing several applications on this test system, most of which ran without any problems. However, since the AMD series comes with the 64-bit version of Windows Vista, drivers can be an issue. We found two pieces of software that required special beta drivers and executables in order to run. These were specialized applications that most people don't use (and they required USB Secure Keys), but with our limited time testing, the chances of another such issue are likely. If you are sure of the environment you will be using this computer in and use very few titles from small vendors, it is safe to take the 64-bit jump. The HP Pavilion dv9200z offers everything you need in a well thought out media system. You can watch high def content on-the-go or on a big screen with full 5.1 surround. The battery life was disappointing, but when DVD drives became the norm, most laptops couldn't make it through an entire movie either. While none of the Vista-specific hardware bling is included, no current models offer it either. Vista was responsive and smooth, but for those who want to avoid headaches, we would warn against the AMD chip and go with the Intel Core 2 Duo version. HP made another move into the mini-laptop, or netbook, market today, unveiling three models priced from \$379-\$699. Ever since Western consumers expressed interest in the One Laptop Per TEEN's XO laptop— which launched in 2007 and is aimed at TEENren in the developing world— we've seen an explosion of netbooks from traditional PC makers. Just in the last week, Dell unveiled its Inspiron mini 12 after months of speculation, and Toshiba launched its first netbook in Japan and Europe (but with no plans for the U.S. market). As the global economy begins to slow, netbooks may become the laptop of choice for many consumers and computer makers are jumping in with both feet even as they slash prices on traditional notebooks. Laser printers - HP also provides laser printers, including the HP LaserJet Pro Multi-function, HP LaserJet Enterprise, and others. In a laser printer, electronically operated ink guns are replaced with a laser beam that guides ink to form a print impression. A fuser unit then sticks toner to the paper. Several times, bringing the laptop out of sleep mode caused the screen to remain off and there was no hard drive activity. Trying to return the computer to sleep mode or hibernate failed, and the system had to be powered down. Toyota announces site for its first U.S. battery plant. We were told by HP that the L2335 uses an LCD panel manufactured as a joint venture between LG Electronics and Philips. That would make the L2335 one of the first LCDs on the market to use one of these new panels. HP actually has two models based on this same LG-Philips model, the L2335 and the f2304, which is geared more towards the consumer market and features more HDTV functionality such as integrated speakers and readily available input connections. The L2335 is actually found in the business section of HP's Website, instead of the consumer department. With its pivot capabilities and its numerous adjustability options, the L2335 turns out to be a very versatile monitor capable of playing a number of roles. Gamers may find it to be the ultimate solution due to its clean look, extra real-estate, and super smooth 16ms response rate. With a retail price of around \$1799 it won't be on everyone's shopping list, but those that can (or choose to) afford it should be quite happy. HP has authorized support providers all around the United States. You can enter your ZIP code on HP's support website to locate authorized HP service providers.
